

Ant Treatment Preparation Notice

Treatment Date: _____

A professional technician will enter your residence to **inspect and treat for ants using bait**.

Important Information:

- **You do not need to leave your home** during this treatment.
 - **Do NOT use any pest control sprays or products** before or after the treatment. They can interfere with the bait and reduce its effectiveness.
-

Preparation Steps:

1. **Clean up any food sources** the ants may be feeding on.
 - This helps ensure the ants are drawn to the bait provided by the technician.
 2. **Do NOT move the bait placements.**
 - The technician has placed them in strategic locations for best results.
 3. **Avoid using strong cleaning products** near baited areas.
 - These can disrupt the scent trails that ants use to find and share the bait.
-

What to Expect:

- You may notice **more ants than usual at first**—this is normal.
 - The goal is for the ants to **carry the bait back to their colony** and share it, which helps eliminate the **entire colony over time**.
 - **Do not kill the ants you see.** Let them take the bait back to the nest.
-

If you have any questions or concerns, please contact management.

Thank you for your cooperation!
